Panucker's Store - Mirror

ROBBERS VISIT BASHAW STORE

Tuesday's Edmonton Bulletin has the following account of a robbery at Bashaw on Monday morning last:

McNair Brothers' general store was broken into early Monday morning and between \$200 and \$300 taken from the safe. J. C. McNair, went into the store at noon. He noticed the back door and one of the windows open. Mr. McNair immediately went to the safe and found the door open on its hinges. The thugs had done their job well. Papers were strewn over the floor and the cash and cheque which Mr. McNair estimated as being from \$300 to \$500 had been taken.

Neighbors living next door to the store heard a loud noise during the morning hours. One man, D. E. Miller, got up and looked out of his front window, but everything was apparently all right and he went back to bed. When questioned as to what time he got out of bed, Mr. Miller said he was not sure, but thought it was about two o'clock. A farmer living north of Bashaw, William Reay, told the A.P.P. constable, F. Crossley, that he heard an automobile going at a terrific rate towards Camrose. Mr. Reay said it was about four o'clock.

Tools to gain entrance to the building were taken from the Canadian National Railway's tool shed, that was also broken into. A chisel and hammer had been used to pry open the back window. A large sledge hammer was found on the office desk near the safe. This hammer belonged to the railway shed.

A man without legs has been in Bashaw for the past week. He took up his position in front of the store, where he sold pens, pencils, and other small objects. It is believed that this man was the "look-out" for the thieves as he was nowhere to be found on Monday.

The police are searching the countryside for the criminals, and it is thought that before many hours they will be found. The thieves laid their plans well. Monday the store was not to have been opened. Mr. McNair went in just as he was passing down town. He had no object in paying the store a visit. The thieves were mainly farmers through the winter season. Grass has improved in growth, the oats and barley crops are filling satisfactorily, and other feed crops promise well. The corn crop in southern districts, of which there is an acreage this year double that of last year, will be very satisfactory for fodder, although the early conditions were not such as to bring much of this crop to maturity. The second cutting of alfalfa is about completed, and has yielded fairly heavily.

The labour situation is being handled effectively by the provincial labour bureau, in co-operation with the local U.F.A. and other organizations. The demand for harvest help has been come keen in south-western districts in the past week, but it is being met satisfactorily. No labor shortage is reported from any point.

The labour situation is being handled effectively by the provincial labour bureau, in co-operation with the local U.F.A. and other organizations. The demand for harvest help has been come keen in south-western districts in the past week, but it is being met satisfactorily. No labor shortage is reported from any point.

Consequent upon the death of Chief Justice Scott, of the Alberta Supreme Court, Chief Justice Harvey has been created Chief Justice of the Province, and Justice Simmonds has been created Chief Justice of the Trial Division. Hon. J. R. Boyle, leader of the Liberal opposition in the Alberta Legislature, has been made a Justice of the trial division.

The village council meeting billed for last Tuesday evening, was postponed for a week.

WHEAT AND WEED CROP BEING CUT

Harvesting of the wheatcrop is proceeding now in Alberta under varied conditions. In southern portions of the province, the cutting is from 15 to 25 percent, completed, while in the central and northern districts harvesting operations have just commenced, and will not be general for a fortnight. In the southern areas farmers have improved the grain crops somewhat, and warm weather has aided the filling process to such extent that yields in some districts will be larger than at first anticipated. Notwithstanding the late rains, however, there is a very large area in south-eastern Alberta where the yields will be extremely light, and where much of what grain there is will be cut with headers. This process is now going on, and has been somewhat hampered in some districts by a heavy growth of weeds which has developed since the late rains. In the central and northern districts, chiefly in the districts adjacent to and north of Edmonton, heavy rains in the past week or two have somewhat retarded the ripening process, and harvesting will consequently be delayed another week or two. In these districts the warm weather needed has not been realized in the extent which might have been desired. Nevertheless, with a short period of warm weather and absence of damage from frost, these areas will yield some very satisfactory crops of grain.

One very satisfactory feature of the situation during the past few weeks has been the fact that the weather has been ideal for the process of filling, and the indications are that the grain harvested will be of a very good sample. The heads are showing a good plump condition.

Thus far there has been no damage from frosts, and very little damage from any other cause in any part of the province save that of drought.

The recent rains have been of great benefit to the later maturing crops such as oats and barley and to the feed crops. Even in the southern districts where the grain crop is light, there will now be sufficient feed of a kind to carry over farmers through the winter season. Grass has improved in growth, the oats and barley crops are filling satisfactorily, and other feed crops promise well. The corn crop in southern districts, of which there is an acreage this year double that of last year, will be very satisfactory for fodder, although the early conditions were not such as to bring much of this crop to maturity. The second cutting of alfalfa is about completed, and has yielded fairly heavily.

The labour situation is being handled effectively by the provincial labour bureau, in co-operation with the local U.F.A. and other organizations. The demand for harvest help has been come keen in south-western districts in the past week, but it is being met satisfactorily. No labor shortage is reported from any point.

Canada Forges Ahead

Canada has experienced some very difficult and trying years since the close of the Great War, but it is to be recognized that in this respect the Dominion has not differed greatly from other countries, and with the possible exception of the United States, this country has fared better than others. Of the great industries in which Canadians devote themselves, agriculture has suffered the most and those engaged in it have experienced the greatest discouragements. Nevertheless, it is agriculture which is responsible for the marked progress which Canada is making in world trade and commerce, and although the backbone of this development has been agriculture, it is not only less than a year ago, the financial return to the producers may not, because of existing world conditions, fall much below last year's figures.

The chief increase in exports was in agricultural products, and without any great disturbances and re-established itself on a permanent basis, but this Dominion has moved forward and occupied a much more prominent and important place in the markets of the world, and as already noted, the backbone of this development has been agriculture.

The most gratifying feature of Canada's trade development is found in the steadily increasing rates of exports over imports. During the twelve months ended May 31 last, the Dominion recorded an increase in exports of nearly \$200,000,000. During that period the value of Canadian exports amounted to \$1,808,715,589, while imports totalled \$753,220,752. Exports increased by \$119,000,000 over the preceding year, while imports decreased by \$22,000,000. The chief increase in exports was in agricultural products, wool and paper.

In other words, Canada is becoming more and more a self-contained country, with the development of its own resources. It is able to pay its debts abroad in products rather than through the export of money; it is rapidly developing into a creditor nation which inevitably will be reflected in the increased prosperity and wealth of the Dominion. The fact that Canada is steadily increasing its trade expansion is another and also gratifying evidence of national development and strength. Not so very many years ago the great bulk of Canada's trade both in exports and imports was from foreign countries, passed through English and United States ports. Today Canada's exports to and imports from these countries pass to a great extent directly through Canada's own seaports. For example, export and import trade through the port of Montreal rose to \$25,000,000 in 1925, and \$30,000,000 in 1926. This year, with the result that Montreal now occupies the proud position of fifth among the great ports of the world, ranking after New York, London, Liverpool and Hamburg, and being surpassed on this continent by New York alone. Substantial increases are also shown by Quebec, Halifax and St. John.

Even more striking is the growth of trade in and out of Vancouver. Two years ago Vancouver's total ocean-borne trade amounted to \$9,600,000. This year the total is over \$12,000,000. Exports from Vancouver this year are the excess of exports and imports combined two years ago. Vancouver has in recent years rapidly overtaken other ports on the Pacific coast until in tonnage handled it is exceeded by only one port, and leads the entire coast as an exporter of grain, and this trade is only in its infancy.

Notwithstanding the national shortsightedness of Eastern interests in opposing the construction of the Hudson Bay Railway, that road will eventually be completed and the Bay route for Western products opened. When that day comes, and it cannot much be delayed, the figures of Canada's trade through its own ports will be substantially increased.

The tonnage British vessels carry is increasing, and leads the entire coast as an exporter of grain, and this trade is only in its infancy. They have expressed themselves as wonderfully impressed with the possibilities of the Dominion for continued expansion along agricultural lines, and also in the development of mining and the use of its own oil fields for the production of oil.

When adverse weather conditions, or temporary economic periods of depression overtake the world, such conditions become disastrous and talk blue. There is the slightest ground for any such gloomy forebodings. Canada is essentially sound; it is strong and growing stronger; it is enormously rich in as yet undeveloped resources. There is ample reason for confidence, but not to be lulled into a false sense of security. Canada needs to cultivate a little more patience. That, combined with confidence and hard work, will make Canada one of the greatest and most prosperous countries in the world.

Epidemic Of Death Rays

Russian Government Has Been Bombed With "Death Rays" From Inventors

Russian inventors, since the announcement of Dr. Grigoriy Mendeleev's "death ray" discovery, have been bombarded the Government with letters describing similar experiments made recently in various parts of Russia.

An electrical engineer in Kiev writes that with an electric current of 110 volts, 50 amperes, he has produced a light, a cigarette at a considerable distance and has succeeded in melting a sheet of lead at a distance of 85 feet.

Another engineer, a Government school instructor, submits proof that he has lit a lamp at a foot or 6 inches, made iron dust explode, and set a small bulb red hot, and stopped a hand dynamo.

A naval electrician writes that he was experimenting when, by the use of a light ray, he kept the steamers' engines alight in a crisis when matches were forbidden, and that he was inspired after an experiment with his special ray, by which he set fire to a canvas tent at a distance of 35 feet.

Proves digestive and gives energy. Physicians everywhere recommend it. The kind you have always bought bears signature of Dr. J. C. Fletcher.

Treasure Recovered

Whole Consignment Of Gold On Land—Recovered

The discovery of an unexpected store of gold in the form of the ore Laurentine, which was sunk by a Canadian submarine in 1917 at the mouth of Lough Swilly on the Northern Irish coast, has enabled divers to recover \$250,000 worth of gold bars which had been given up for lost. The divers have been working intensively for six years to recover from "Jenny Jones" the consignment of \$2,000,000 in gold and silver bullion. The whole consignment of treasure has now been recovered.

Pools of Solomon Well Built

The pools of Solomon, named for a locality rather than for the famous king, were built by Roman engineers to provide a water supply for Jerusalem. The three pools, which are eight miles from the city, are fed by large springs and have a total capacity of four million gallons. The Romans built them as well after the many centuries of disease the pools, the springs and the aqueducts had only been cleaned and the locks replaced to give Jerusalem again an excellent water supply.

Best Immigration Agents

Would Send to Britain Those Who Have Met With Success in Canada

The kind of publicity Canada needs in Great Britain is to send men and women there who were successful in Canada from the Old Land and have made good and are happy and contented in Canada to tell of their experiences. It is not how to go about emigrating, in the opinion of Mrs. Charles H. Thorburn, of Ottawa, honorary commissioner on behalf of Canada, but the British Exhibition and Canadian Government delegates to the International Labor Conference at Geneva, who returned home recently. Mrs. Thorburn is making a report to the Minister of Labor on the Labor Conference. She paid high tribute to Tom Moore, President of the Canadian Trades and Labor Congress, who, she said, was the finest labor leader at the conference.

Ladies Remove Their Corns In A Very Simple Way

No pain, no trouble, costs only a trifle. It is a very simple way to get rid of a corn on a small application of good old Putnam's Corn Remedy. It is a simple way to get rid of a corn on a small application of good old Putnam's Corn Remedy. It is a simple way to get rid of a corn on a small application of good old Putnam's Corn Remedy.

Canadians Return From U.S.

Over Eighteen Thousand Wander Back During Period of Three Months

A pronounced return movement of Canadians from the United States is indicated in immigration figures made public.

During the four months of April, May, June and July of the present year, a total of 18,747 Canadians returned to Canada from the United States. Of this total 16,676 were men, and 2,071 were women. The British subjects who had acquired Canadian domicile, and 1,058 were classified generally as "Canadian citizens."

Immigration for the four months showed an increase of 17 per cent over the same period of 1925. The total number of immigrants entering Canada from all countries during April, May, June and July was 41,023, as compared with 34,132 during the same months of 1925. Of this total 22,818 came from the British Isles, 7,005 from the United States and 22,770 from "other countries."

Astronomer Is To Map Southern Cross

Mr. Massey Brings Long Experience to His Task

Mapping the heavens that look down upon the "Laid of the South" is the task of the astronomer, Mr. Massey, of the University of Michigan, who is to map the Southern Cross in the next few years.

With other astronomers he has mapped the double stars of the north. In the Southern Cross he has found a small number of stars.

His quarterly search for stars has been successful. He expects to devote seven or eight years in completing the work.

He will take a 27-inch telescope. His probable location will be Naval Hill, looking down upon Bloemfontein, in the Orange Free State, although the location of the map is not yet decided. He will be chosen. He found points near Bloemfontein have the advantage of clear, dry atmosphere, visibility to the horizon edge and almost 300 cloudless nights a year.

From his experience searching for stars in the Southern Cross, he believes that the third of the sky not mapped will add 1,800 double stars above the ninth magnitude to those already known.

Students Visit Mines

Under Graduates of U.S. University Made Tour of Canadian Mines

On a tour of inspection of the mining industry of Canada and the United States, 22 under graduates of the School of Mines of Lehigh University, Bethlehem, Pa., visited Toronto recently. They were met by the party covered 3,500 miles of the five weeks of their tour.

From Toronto, the six Canadian students went to North and from which center they were taken to Cobalt, Porcupine, Kirkland Lake, Sudbury and other mining centers. They were then taken to the mines of the United States, leaving Canada by way of Saint Louis.

On the return journey, the chief mining centers of Michigan, Pennsylvania, New York and Pennsylvania were visited. Complete camping equipment was carried and all arrangements for the tour were made by the Lehigh University.

Vikings Of The Air

Indomitable Spirit of Adventure Is Leading Ascent to Science

The whole spirit of flight is still in its infancy. It can only progress by steady research and constant experiment. There we have the true Viking spirit, the spirit of adventure, the spirit of the Viking, the spirit of the Viking, the spirit of the Viking.

Only by the courage and resourcefulness of the Viking spirit can the problem of aviation be fully solved. The Viking spirit is the spirit of the Viking, the spirit of the Viking, the spirit of the Viking.

The Viking spirit is the spirit of the Viking, the spirit of the Viking, the spirit of the Viking. The Viking spirit is the spirit of the Viking, the spirit of the Viking, the spirit of the Viking.

POOL ESTIMATES WHEAT YIELD AT 265,000,000 BUS.

Regina. — The Inter-Provincial Wheat Pool Selling Agency estimates the total wheat crop of the wheat growing provinces at 265,000,000 bushels.

This is approximately one hundred million bushels less than the estimate recently published by a Winnipeg newspaper, according to A. J. McPhail, President of the Selling Agency and of the Saskatchewan Wheat Pool.

Condemning exaggerated crop estimates as "misleading and detrimental to the farmers," Mr. McPhail said that the Winnipeg newspaper report in question resulted in a drop of 35 cents in the price of wheat on the market immediately after it had appeared.

"The report is misleading," said Mr. McPhail, "because it is based on the supposed acreage sown to wheat and takes no account of the fact that hundreds of thousands of acres have since been plowed under."

The inter-provincial wheat pool selling agency estimates that the Saskatchewan wheat yield will be 150,000,000 bushels at the outside, with 70,000,000 or 75,000,000 bushels in Alberta, and 37,000,000 to 40,000,000 bushels in Manitoba. This estimate of 265,000,000 bushels for the three provinces at the best is based on reports received from 86,000 farmers reporting on their own fields.

Bordeaux Jail Investigation

Discover Plot to Liberate Four Men Under Sentence of Death

Montreal.—Liberation from Bordeaux jail of four of the six bandits who held up the Hochelaga Bank collection car in April last, looted it \$112,385 and killed its chauffeur, Henri Cloutier, was the real aim of the plot which was smashed when Giuseppe Serenati was detected making his way out of the prison early yesterday morning. Ramifications of the plot have been laid bare by the investigation ordered by the provincial government. Reliable information led to the effect that the getaway plans succeeded, Louis Morel, Frank Gammon and Leo Davis would have followed in Serenati's freedom from "death row" where they are awaiting execution October 26. The trio, it is understood, have been confined with Serenati in adjoining cells of one wing of the prison. They are said to be plotting to escape in another way.

Treaty Of Lausanne

France Is Fourth Power To Ratify the Treaty

Paris.—The French Senate has ratified the Treaty of Lausanne, re-establishing peace in the Near East and with only twenty negative votes. The chamber had voted ratification on Monday.

France is the fourth power to ratify the treaty, which became effective August 6 on its third ratification. Great Britain, Italy, Japan and the United States have also ratified it.

To Plead Case Alone
Victoria, B.C.—Premier Oliver will not be accompanied by Government counsel when he attends the sitting of the Board of Railway Commissioners in Ottawa on September 17. He stated today that he has no need for legal assistance when the board takes up the complaints against the restoration of the C.P.'s West Pubs agreement freight rates.

Unemployment in Great Britain
London.—Unemployment in Great Britain has been slowly growing since the last census. It is now estimated that the number of people out of work has increased by thirty thousand over the number in the previous week. The total number of unemployed is now estimated at 1,123,000.

Trade With Germany Grows
Ottawa.—Canada Imported goods from Germany to the value of \$6,041,000 during the year ended July, nearly double the amount of the previous year. Canadian exports to Germany during the twelve months were \$17,814,000, an increase of seven million over the year previous.

To Probe Liquor Exporting
Windsor, Ont.—A thorough probe into the liquor export business along the Essex border will be instituted shortly by the government. It was learned here, More stringent regulations are in prospect which will make the export business much less profitable than it is at present.

British troops number 157,490, of whom 109,273 are at the front. This does not include 19,616 in India.

Will Learn Fate Soon

Chicago Youths to Receive Sentence On September 10

Chicago.—After portions of the closing argument of Robert E. Crow, States Attorney, have been stricken out by Judge John R. Caverly as a "redundant, distasteful and irrelevant" attempt to intimidate the jury, the court took under advisement the penalty which he must decide for Nathan Leopold and Richard Loeb, confessed kidnapers and murderers of Robert Frank.

The members of the court are out of a clear sky and startled the crowd of court room into a shocked silence. Mr. Crow's jaw dropped, and he blushed vividly under the judicial broadside. "Your honor, I had," he began, but the judge interrupted him. "The State's Attorney knows full well that his remarks would be heard and read," said the court. "He knew, too, the court would have no opportunity to reply or defend himself from criticisms except by the action he has taken."

The judge read a prepared statement, and at its conclusion announced he would give his decision September 10, at 9:30 a.m., "unless I am prevented."

MacLaren-Willing To Make Another Trial

Will Attempt Weight Fight If U.S. Aviators Fall

Edmonton.—If the Americans do not win, I'll tackle it again next year," So stated Major A. Stewart MacLaren, British flying ace, concerning possibilities of another attempt at round-the-world flight. Major MacLaren was in Edmonton enroute from Montreal, and was enroute to the train to leave for London.

"What do you think of the Americans' chances of getting through?" correspondents asked him. "I am of the opinion that they will succeed on the basis of a brief interview with the trial aviator." "I am sure they will get a good chance of completing the flight," he replied. "Of course, they have a number of obstacles still to overcome and the rest of the journey won't be exactly smooth sailing. But they are getting good co-operation from the United States government, and with decent luck they ought to make it."

Will Defer Action

Board of Grain Commissioners Consider Changes in Tariff

Winnipeg.—The Board of Grain Commissioners have in private session here, today, to consider proposed changes in the tariff regulations raised by representatives of the Saskatchewan Co-operative Wheat Producers' Association.

It is thought likely that the board will defer action on the suggestions until the report of the Royal Grain Inquiry Commission has been received before the Government. Members of the commission have left for the east.

Report Fewer Drug Addicts in Canada

Noticeable Improvement Especially in B.C. Says Health Department

Ottawa.—Reports to the Health Department, indicate that drug addicts, taking the country generally, are on the decline, and that there has been a noticeable improvement in British Columbia. Stories that addicts are not infrequent in the secondary schools of British Columbia are doubted. There may be an isolated case here and there, it is stated, but advanced far enough to have been brought to the attention of parents or teachers, but such cases would be very unusual.

New Canadian Industry
Ottawa.—For the first time in Canada, a new kind of automobile has been built to a wide degree of success and within a few weeks by the Consolidated Motors in British Columbia. Advertising received by the Government from this firm state that seventy-eight tons were recently shipped. It is the first export of the bounty on copper provided in last session's legislation.

Death of E. J. Chamberlain
Ottawa.—Joseph Chamberlain, aged 72, recognized as one of the most competent and successful railroad men in the Dominion and one of the foremost operating experts on the continent, died recently at Pasadena, Calif., according to word reaching the capital. The funeral will be made at St. Albans, Vermont.

Compulsory Wheat Pool For Australia
Melbourne.—Announcement of the Government of Victoria's proposal to form a compulsory wheat pool, was made by Premier Joseph Cook at the opening of the Victoria legislative assembly. The Premier also announced that the Government proposed to establish an agricultural bank.

United States Is Invited To Disarmament Conference

Geneva.—The League of Nations has extended an official invitation to the United States Government to send an official representative to participate in the deliberations of the disarmament conference, which will be appointed by the league assembly. This initiative, which is unique, is the outgrowth of United States participation in the league's preliminary study to elaborate a convention for international control of the traffic in arms.

Alberta's Dairy Pool

Vigorous Campaign Will Be Carried On Throughout Harvest Season

On Thursday all documents for the formation of the Alberta Co-operative Dairy Pool are now in the hands of Attorney-General Brown, who met the investigative committee of the provisional board in Banff.

Throughout the harvest season a vigorous campaign of information and working of the pool will be carried on, and by November 1 a definite report on the situation will be launched.

H.B. ROAD MUST BE COMPLETED SAYS MINISTER

The Plan, Man.—The Hudson's Bay Road is not a political football.

It has been the policy of the present Government ever since the time of Sir Wilfrid Laurier that this route should be completed as a link between the west and Canada, and has been committed to build the road by both Liberals and Conservatives," declared Hon. W. R. Meagher, Federal Minister of Agriculture, speaking at a luncheon tendered by The Plan Board of Trade.

"Now, the war has been over five years, and I believe Canada is now capable financially, and otherwise, of completing the Hudson's Bay Road," The Plan Board of Trade has been known to be "hot road for wheat and cattle, but it has been a success. There appears to be no reason why the road should not be completed as a link between the west and Canada."

Any national enterprise is more or less gamble, and the Hudson's Bay Road is no exception. It is a gamble, but it is a gamble worth making, and it is a gamble worth making."

There are two main reasons for the building of the road. First, those opposed to the expenditure of vast sums of money on the road, do not know of any certain way of demonstrating the practicability of the Hudson's Bay Road except by trying it.

Second, the road is a link between the west and Canada, and it is a link worth making. It is a link worth making, and it is a link worth making."

A Distinguished Visitor

Edmonton.—A request is being made by the Alberta Government that the Ottawa authorities take steps to hold off the increase of cargo rates on grain by the Vancouver steamer line.

This initiative has been given a thorough investigation and a hearing of all interests involved. Premier Greenfield has sent a wire to Hon. Macdonnell King and the Minister of Marine and Fisheries, in which he asks that they take this action in accordance with previous understandings in the matter.

"And yet," Mr. Macdonnell added, "there is something so fine and strengthening in it all that the work may be done. The work itself makes its success almost inevitable."

The Premier referred to the recent report of the British fleet off Spithead. He remarked that many who viewed it thought the line of the battle fleet a very short one.

"At that starting point was a great achievement," Mr. Macdonnell declared. "Great Britain signed the convention of Washington, and the British always shall, and must, carry out that compact and honor its signature."

He remarked that he was going to Genoa shortly, but that he was unable to say what would be done there, as he would be in the country.

"But whatever happens if we are to go on with this process of disarmament we cannot do it alone. It must be mutual, with sincere consent. The other nations must stand alongside us. In London recently we managed to get a good start, and now we must make it a beginning towards better things."

"So long as I hold the position I intend to do my utmost to be directed towards making that beginning successful in further efforts and further steps."

Germany Discharges State Employees

General Reduction Necessary To Aid in Balancing Budget

Berlin.—Four hundred thousand of the 1,600,000 state employees will be discharged in Germany during the past few months under a law proposed by the government.

It is estimated that 400,000,000 gold marks will be saved for the government. General conditions on the labor market are bad, owing to the economic depression caused by the war.

MAN WHO GUIDE DESTINY OF THE BRITISH EMPIRE

Peres, Scotland.—Ramsay MacDonald, the British Prime Minister, in a speech has declared that the heavy responsibilities of the people governing the extraordinary federation of self-governing nations comprising the British Empire, Mr. MacDonald said they sometimes had the feeling that human wisdom and strength were unequal to the task of guiding them.

"And yet," Mr. MacDonald added, "there is something so fine and strengthening in it all that the work may be done. The work itself makes its success almost inevitable."

The Premier referred to the recent report of the British fleet off Spithead. He remarked that many who viewed it thought the line of the battle fleet a very short one.

"At that starting point was a great achievement," Mr. MacDonald declared. "Great Britain signed the convention of Washington, and the British always shall, and must, carry out that compact and honor its signature."

He remarked that he was going to Genoa shortly, but that he was unable to say what would be done there, as he would be in the country.

Widening the Resources of Our Forests By Utilizing Waste

The enormous amount of fire-kill material, and what bonded to it, has been a source of it has been given much attention by those concerned with optimum utilization of the forest. It has been fully and carefully investigated by the Forest Products Laboratory in the Department of Agriculture, the object being to determine the effect of fire-killing and superheating on the pulp qualities of the spruce and balsam. The results of this investigation have demonstrated that this otherwise waste product can be successfully used for pulp manufacture by the sulphite process. Such a result will mean much to the mills, in that it will enable them to produce and will enable them longer to withstand the enormous losses being made upon them for the material for what was at one time most a luxury but what is presently required.

Use Desert Heat to Store Up Energy For Future Use

Desert heat plants which would condense chemical compounds by the aid of sunlight, thereby storing the energy to be released when they are burned, is the method.

Cow-Buffalo Is Being Evolved At Bl

Working on this principle, the department of Interior is developing a cow-buffalo hybrid, which will withstand severe northern climatic conditions. Some 7,000 animals are being used in the experiments.

"As soon as we get some buffalo blood into the cow, there will be an extensive livestock department in the northern areas," Sir Robert told the scientists. "The experiments are being carried out on a large scale, and success seems imminent."

Decreases Hog Value

by the Dominion Department of Agriculture (Livestock Branch) guided by the farmer and breeder. The hog is rather subject to bruising, which, of course, means depreciation value. Rough handling is one of the causes, and one that leads to the loss of the animal. The hogs were first handled with bruises. Still, says the leader, 2,500,000 hogs are slaughtered in the packing plants annually, of which often 15 per cent are bruised. The loss of the bruised or scoured, a loss is estimated at \$900,000. In a four-month period during which 24,000 hogs were examined, it was ascertained that in a single lot of 2,000 hogs, the loss was as much as five dollars in value, that the average loss amounted to \$2.50 per head. In cattle, the loss of horns is often the cause of much injury and consequent loss.

Motor Engineer Says Modern Cars A Wasteful In Operation

...pounds and capable of running at 100 miles on a gallon of gasoline will be in general service. It holds that there are now in use are absurdly heavy and wasteful in operation. The efforts of modern designers have been to the direction of the ideas of this speed. Little, less weight and more miles are what the trade is looking for. The cheapness of gasoline in this country is a deterrent to progress along such lines. European inventors and designers are working on lighter cars and striving to extend the mileage. The price of petrol averages much higher there than here and the saving is important. —Los Angeles Times

A River Of Golden Grain Flowing From The Farms Of The Prairie Provinces

A never-ending stream of gold, flowing from the farms of the Prairie Provinces to the consumers of bread stuffs in all parts of the civilized world, is represented by the movement of the farmers' grain to the world markets. Beginning in August each year and in some years flowing constantly forward until August of the following year, this overwhelming river of wheat, this overwhelming river of grain, is the lifeblood of the Canadian National Railways year by year are playing a more important part.

Long before the western farmer has finished his seeding in the spring, preparations have been begun by the railways to move his crop. Cars must be ordered, for each year more equip-

ment is needed for the movement of the grain; other cars, which have been in service, must be brought into the repair yards or overhauled or rebuilt according to their needs, for the movement of grain is a strenuous work and grain cars show the effects of a season's handling. And, also, cars could not move forward without motive power, new locomotives or necessary hauling power are necessary must be ordered while those which have already seen service in this strenuous work must also be brought in to the huge repair shops and overhauled and made ready.

Nor is this all. In preparation for the movement of heavy trains loaded with wheat in order that there shall be no delay enroute from the west to the east, the grain must be checked in order that there shall be no contention or delay in their handling, the economy of the work in handling the grain movement may easily be realized. And to handle 17,000,000 bushels of grain in the two outlets, the Great Lakes and the Pacific ports, means that train loads of grain must be kept constantly on the move, both eastward and westward. The growing importance of the Pacific outlet is shown by the fact that Canadian National car deliveries to Vancouver during the grain year just closed, have been almost five times as great as during the season of 1922-23, and as more facilities are provided for the handling of the westbound shipments it is expected that the next few years will see enormous gains still being made year by year in this movement.

If you would know the difference between impertinence and regret, also ask the man who says it.

When it is realized that upwards of 10,000 grain cars are on the Canadian National lines in the Western region almost continually, and that every movement of these cars must be

Farmers' Grain at Line Elevators

company throughout the western region, a complete report on the loadings and movements of grain cars at the close of each day. These reports are telegraphed to Winnipeg where, with advice from the lakehead and Vancouver, they are assimilated. Hence, with one dispatch very simply compiled, the entire grain situation is shown for the preceding day throughout Western Canada. Figures for previous years are also kept on record with the reports as they come in and at any time comparisons may be made to show the progress over the same period of such successive seasons for five years.

When it is realized that upwards of 10,000 grain cars are on the Canadian National lines in the Western region almost continually, and that every movement of these cars must be

Natural Resources Bulletin

Immense Quantities of Sand and Gravel Used in Canada
The Natural Resources Intelligence Service of the Department of the Interior at Ottawa, says:

One of Canada's most important economic natural resources, from the standpoint of utility, is that of sand and gravel. While not of large monetary value, compared with other mineral products, it is one of the classes of non-metallic minerals that it would be exceedingly difficult to get along without.

It is not necessary here to detail the great number of purposes for which sand and gravel are used. The movement for the provision of better roads is based entirely upon supplies of sand and gravel, while the use of cement would be very materially restricted were it not that when mixed with sand and gravel, concrete can be made of reasonable cost.

The railways are largely dependent upon sand and gravel for ballasting their tracks, while no railway locomotive would be allowed to leave a station without a supply of sand for friction purposes.

In some portions of Canada gravel is not readily procurable, and consequently is more greatly appreciated than in those portions more generously supplied. This is particularly true in some sections of the prairie provinces, where both sand and gravel for construction purposes have to be brought considerable distances.

There are several varieties of sand in Canada, varying in fineness and in composition. In certain portions of Canada a sand suitable for glass making is found, while in others a sand useful for moulding purposes is found. The larger portion of the output of sand and gravel, however, is used for construction work, and it is in this form that the public is most familiar with this necessary material.

Loading Wheat into Box Cars

Increasing in Cattle Exports

For the first six months of the present year Canada has exported 23,173 cattle to Great Britain and 40,352 to the United States, as compared with 20,825 to Great Britain and 23,625 to the United States. In the first six months of 1923, an increase of 18,991 head in favor of the present year.

Prince's Steak Winners

Captures Gold Medal Offered By British Association of London
King of the Prairie, a white Shorthorn bull, bred on the farm of H.B. the Prince of Wales, in Britain, and brought to have Alberta ranch as a three-year-old, has been awarded the gold medal offered by the British Association of London for the best bull shown in Western Canada by a Canadian exhibitor. The award was made in Regina recently.

This bull has been granted champion wherever he has been shown and is the principal stock bull at the ranch. The ranch was also awarded reserve champion on a red yearling Shorthorn bull, which was also bred in the Old Country by the Prince of Wales and brought here last year as a calf.

In addition to an exhibit of twelve Shorthorn cattle, the Prince of Wales ranch entered twelve Shropshire sheep, capturing the championship for ewes and rams in the Hampshire class and the championship ewes in the Shropshire class. The P. W. Ranch, owned by the Prince of Wales, is about 20 miles from High River and about 60 miles from Calgary. It covers about 6,000 acres.

Some Chinese cities have streets that are only three feet wide.

Western Canada Corn Is Said To Be Better Grade Than That Produced In South

Better Production In Canada

Production of Creamery Butter in 1923 Exceeded Any Previous Year

The quantity of creamery butter made in Canada in 1923 was 163,456,729 pounds, valued at \$56,894,008, an increase in quantity over the preceding year of 10,955,869 pounds, or seven per cent, and an increase in value of \$2,107,726, or six per cent. The average price per pound for the whole of Canada was 24 cents in 1922 compared with 25 cents in 1923. The production of creamery butter in 1923 exceeds in quantity the production of any previous year and is exceeded in value only by that of 1920 when the average price per pound was 27 cents.

The province of Quebec was the leader in the production of creamery butter in 1923 with 60,179,616 pounds; Ontario came next with 51,771,180 pounds; Alberta third with 17,628,155; then Saskatchewan, 10,867,010; Manitoba, 8,323,069; Nova Scotia, 3,550,664; British Columbia, 2,941,164; Prince Edward Island, 1,527,471; and New Brunswick, 1,331,417.

The total output of the creameries, cheese factories, combined butter and cheese factories and condensereries in 1923, was valued at \$120,110,562, an increase over 1922 of \$15,128,514. Compared in the total output are butter, cheese, condensed products, ice cream, cream, whole milk and cream sold, buttermilk, etc.

A Commendable Work

Tablet Is Erected At Fort Livingstone, Saskatchewan

The erection of a tablet at Ft. Livingstone, Saskatchewan, a short time ago, attracted little attention in the province. The fact that Ft. Livingstone was the first capital of the Northwest Territories (1876-7) and that the first session of the Northwest Council was held there was probably known only to the "oldtimers." A generation is growing up which needs to be instructed in the early history of its province; and for that reason the action of the Historic Sites and Monuments Board of Canada in selecting a spot at Ft. Livingstone as a site for a tablet is to be heartily commended. The site of Ft. Livingstone is one of the most important historic sites that have already been marked by the board and of the one hundred and twenty-six sites that have been adopted worthy of preservation.—Regina Leader.

A New Product

Cocoa Bread Retains Freshness Longer Than Ordinary Bread

Something new in bread is announced by the United States Department of Agriculture. It is cocoa bread, has a taste and texture, and retains its freshness longer than ordinary bread. The product was achieved by substituting eight to ten per cent of cocoa in any good bread formula with cocoa and omitting shortening, which is supplied by the cocoa. An equal quantity of sugar and cream is used. The bread is dark brown.

Tourist Trade Booming

That tourist trade has been booming, especially at Jasper Park and Minkah, was the statement made by Walter Pratt, general manager of hotels and dining cars for the Canadian National Railways, during his recent tour of inspection of the system's lines. Mr. Pratt said the new 15-hole golf course at Minkah would be ready for play next year, and he hoped also that the 18-hole course at Jasper would be available for use when the 1925 tourist season opens.

Southern Alberta Honey

Between 25,000 and 50,000 pounds of honey in its first year in the bee business in Southern Alberta is the record which George Ruidt expects to set up this year from his 200 colonies of bees in six apiaries throughout the Coadvale irrigated district. Mr. Ruidt, who claims that Southern Alberta is one of the finest bee districts in the world, and certainly the best in Canada.

Canadian Honey For Export

According to C. G. Gooderham, Dominion Apiarist, a conservative estimate of the Canadian honey available for export this year places the quantity at 4,000,000 pounds. This will have the effect of stabilizing the price of the commodity in the home market, says Mr. Gooderham.

Expect Big Crop

Western Manitoba this year will harvest its largest crop since 1915, it is expected by the province's farmers, who returned recently after travelling 1,000 miles through part of the province.

According to press dispatches samples of Canadian corn were in the hands of some of the grain exporters of Vancouver recently, for the purpose of foreign shipment but to show what Canadian prairie corn is like.

According to the grain experts it is better than corn being raised in the north from Illinois. When United States corn goes too high for the market the practice has been to balance the trade by importing it from Manitoba, but local grain men stated recently that if the area of Canadian fields is ever permitted to expand annually as it has done in the past ten years there will be little necessity in a few years for Canada to go outside for corn.

Since 1915 the acreage devoted to corn in Western Canada has increased 1815 per cent, and the production by 2500 per cent. It is estimated that 100,000 acres in Alberta and a similar area in Saskatchewan have been planted in corn this year, which will represent at least of about 50 per cent over last year.

Manitoba's expansion is slower, but an increase of about 25 per cent, is estimated in that province.

In the year ending May, 1924, Canada imported for consumption 3,205,600 bushels of corn from the United States compared with more than 10,000,000 bushels the year before and about 1,000,000 bushels in the year ending May, 1922.

This shows that Canada is gradually becoming more and more self-sufficient in the matter of farm products.

In 1923 the three western prairie provinces of Alberta, Saskatchewan and Manitoba produced over 2,000,000 bushels of corn valued at \$2,500,000.

As it appears to grow well in Alberta, Vancouver grain dealers are particularly interested as they prophesy that Western Canada will ship more corn through that port. Canada and livestock dealers are also interested as they claim that an increase in corn production in Canada will mean the possibility of concentrated loads for the world markets.

New Kinds Of Wheat

Revolutionizing Wheat Expected To Result From Experiments

If experimentation which is now being conducted on 50 farms in the west from samples sent from the seed branch at Ottawa, prove successful there will be two new kinds of wheat maturing early enough in escape the rust season. It is hoped to revolutionize wheat growing. The preliminary advice which have been received indicate healthy and favorable prospects.

The new brands, which have been the subject of long experimentation at the Central Farm, are known as Revolution and Dominion. Revolution is an exceptionally good quality of wheat which matures fairly a week earlier than King of the South. Dominion is a difficult to grow wheat which, while maturing late, will outlive others in the standard of quality. In the Dominion is corn production in Canada with there is no, only exceptionally early growth, but the quality is described as superior.

The samples sent to areas where the crops are very poor, but those sent to the more fortunate districts are very promising, according to reports received at Ottawa.

To Come Back Later

Lord Beaverbrook, British politician, who has been visiting the Dominion, is expected to return to his home in England at some future date.

Lord Beaverbrook is a native of New Brunswick, and was Sir Max Aiken before being elevated in a peerage.

New Hospital Districts

New rural municipal hospital districts continue to be organized in Alberta. The latest is at Westbrook, north of Edmonton. There are now 15 of these hospital districts operating in the province, and serving a total population of 255,000, or about one-third of the rural population of the province.

The Japanese Government has decided to pay all the travelling expenses of Japanese natives who emigrate to Brazil, and to make a grant of such of two hundred yen or one hundred dollars.

Twelve hundred dollars in cash and bank books showing deposits of more than \$25,000 were found on a corpse who had been arrested in Redding, Calif., for begging.
